AI Islamic Teacher Platform

Full Product Specification and Developer Blueprint (MVP v1.0)

1. Executive Summary

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

2. Business Goals

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

3. Product Vision

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

4. Target Audience

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

5. User Personas

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

6. User Journeys

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

7. Learning Methodology

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

8. Curriculum Framework

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

9. Course Structure

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

10. Lesson Structure

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

11. AI Teaching Engine

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

12. Voice Narration System

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

13. Reflection Engine

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

14. Quiz Engine

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

15. Quiz Evaluation

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

16. Ask The Teacher Q&A;

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

17. Citation and Reference Engine

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

18. Student Dashboard

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

19. Progress Tracking

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

20. Adaptive Learning

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

21. Weakness Detection

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

22. Daily Streaks

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

23. Assessments

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

24. Admin Portal

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

25. Content Management

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

26. Database Design

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

27. API Design

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

28. Frontend Architecture

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

29. Backend Architecture

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

30. AI Prompt Strategy

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

31. Security Requirements

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

32. Analytics

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

33. Monetization

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

34. Deployment

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

35. Testing Strategy

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

36. Acceptance Criteria

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements,

workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

37. Roadmap

This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria. This section defines detailed requirements, workflows, user stories, technical expectations, constraints, data flows, and acceptance criteria.

Requirements: The feature must be production-ready, responsive, secure, measurable, and scalable for future school and homeschooling deployments.

Database Schema

Users, Profiles, Courses, Modules, Lessons, LessonReferences, Quizzes, Questions, QuizAttempts, StudentProgress, Reflections, QuestionHistory, AIResponses, Notifications, AuditLogs, AdminUsers, Permissions.

Core User Stories

User Story 1: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 2: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 3: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 4: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 5: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 6: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 7: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 8: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 9: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 10: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 11: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 12: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 13: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 14: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 15: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 16: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 17: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 18: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 19: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

User Story 20: As a student, I want the platform to guide me through structured learning and provide personalized feedback.

Developer Deliverables

• Authentication Module

• Course CMS

• Lesson Viewer

• Audio Player

• Q&A; System

• Quiz Generator

• AI Grading

• Analytics Dashboard

• Admin Portal

• Deployment Scripts

• Documentation

Technology Stack

Next.js, TypeScript, Tailwind CSS, Supabase, OpenAI GPT-5, ElevenLabs/Azure Speech, n8n, Vercel.

Development Timeline

Weeks 1-2 Foundation, Weeks 3-4 Curriculum and Progress, Weeks 5-6 AI and Q&A;, Weeks 7-8 Voice and Testing, Weeks 9-10 Beta Launch.
